Project introduction:

->This project is based on QR Code .

->It has been made my using python language.

->It takes UPI Id as input and generate it as qr code.

Working:-

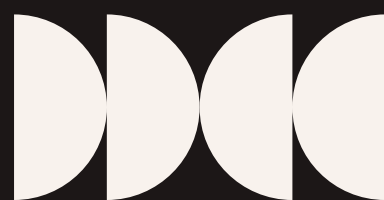

Here's how it works:

Data Input: You enter the desired information into the generator.

Encoding: The generator converts the data into a specific pattern of black and white squares.

QR Code Generation: The generator creates a visual representation of the encoded data.

Download or Print: You can download the QR code as an image file or print it directly.

The following steps are the representation of whole process :-

STEP 1.

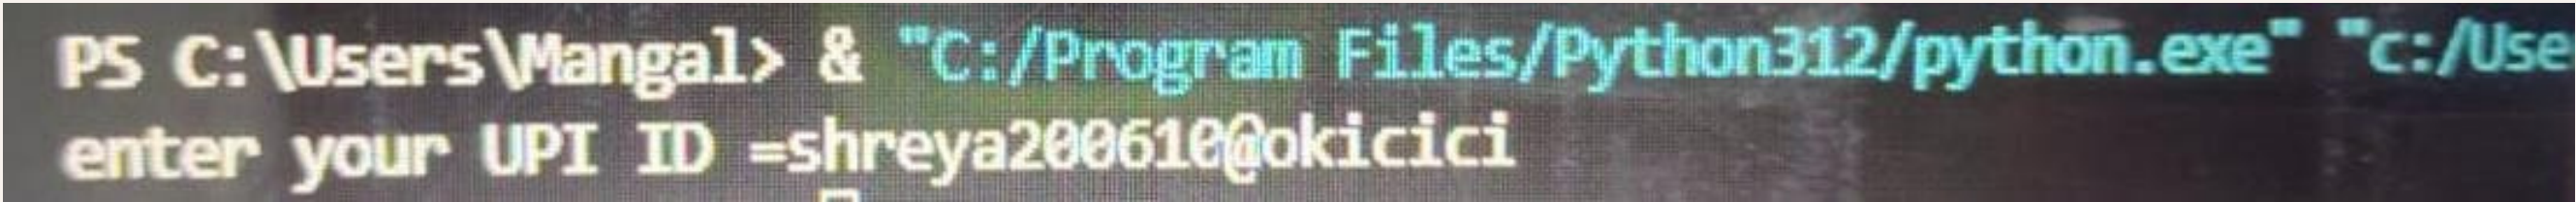

In the first step the program asks the user to enter their upi id , as shown in the diagram-

A screenshot of a Windows command prompt window. The title bar is not visible. The prompt is 'PS C:\Users\Mangal>'. The command being entered is '& "C:/Program Files/Python312/python.exe" "c:/Use'. The text 'enter your UPI ID =' is visible on the line below the command.

```
PS C:\Users\Mangal> & "C:/Program Files/Python312/python.exe" "c:/Use
enter your UPI ID =
```

STEP 2.

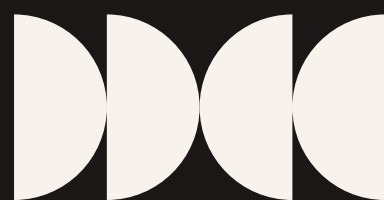

In the next step the user has entered the upi id , as shown in the diagram-

A screenshot of a Windows command prompt window. The title bar is not visible. The prompt is 'PS C:\Users\Mangal>'. The command being entered is '& "C:/Program Files/Python312/python.exe" "c:/Use'. The text 'enter your UPI ID =' is visible on the line below the command. The user has entered 'shreya200610@okicici' as the UPI ID.

```
PS C:\Users\Mangal> & "C:/Program Files/Python312/python.exe" "c:/Use
enter your UPI ID =shreya200610@okicici
```

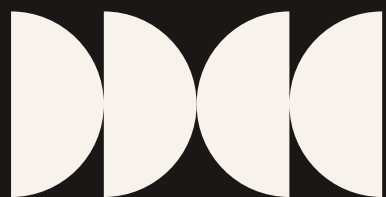

STEP 3.

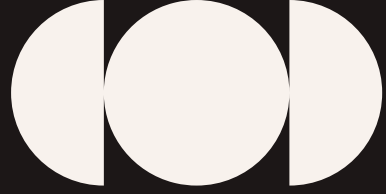

As the user has entered their UPI id
the QR code has been generated.

Scope in future:-

- Enhanced Security and Privacy.
- Product Information and Marketing
- Dynamic QR Codes with Real-Time Updates.
- Healthcare
- Biometric Authentication with QR Codes
- Education
- AI-Powered QR Code Generation and Analysis
- Product Information and Marketing
- Personalized Experiences

**THANK
YOU**
